

“Driving motor technology”

ATS Engineering Receives Contract for Speciality Motor Build from Mustang Advanced Engineering

Plymouth, Mich., (Sept. 27, 2010) -- ATS Engineering, designers and manufacturers of a comprehensive product line of AC motors for use by specialty equipment manufacturers, announces it has secured a custom motor design and build contract with Mustang Advanced Engineering, a military test stand systems integrator based in Twinsburg, Ohio. Mustang Advanced Engineering selected ATS Engineering through an extensive technical and commercial evaluation process.

ATS Engineering was able to deliver unique specifications for the one-megawatt AC induction motor, which few suppliers had the depth of engineering to design and build. With ATS Engineering's experienced engineering staff and accepted critical path project planning tools, ATS Engineering will provide the manufacturer with an advantage of quality, delivery, reliability and performance.

Mustang Advanced Engineering is an industry leading supplier of custom engineered dynamometers and advanced testing and measurement systems.

Noted Tim Sante, North American National Sales Manager, “This contract award is proof positive that ATS Engineering offers unique capabilities to deliver custom motor designs and can deliver these designs in a price competitive fashion.”

About ATS Engineering

With North American operations in Plymouth, Michigan, ATS Engineering is a Dresden, Germany-based manufacturer of high performance AC motors with a global sales and support network. ATS Engineering designs and manufactures a comprehensive product line of AC motors for use by specialty equipment manufacturers in applications for the North American automotive, machine tool, heavy duty metal forming and plastics extrusion industries. The company drives motor technology through continued investment in research, resulting in innovative designs for reliable and cost-efficient operation.
